Pages Connectivity of

The Database of the Software

“tablemanagement” is the database of this software. It has 3 tables.

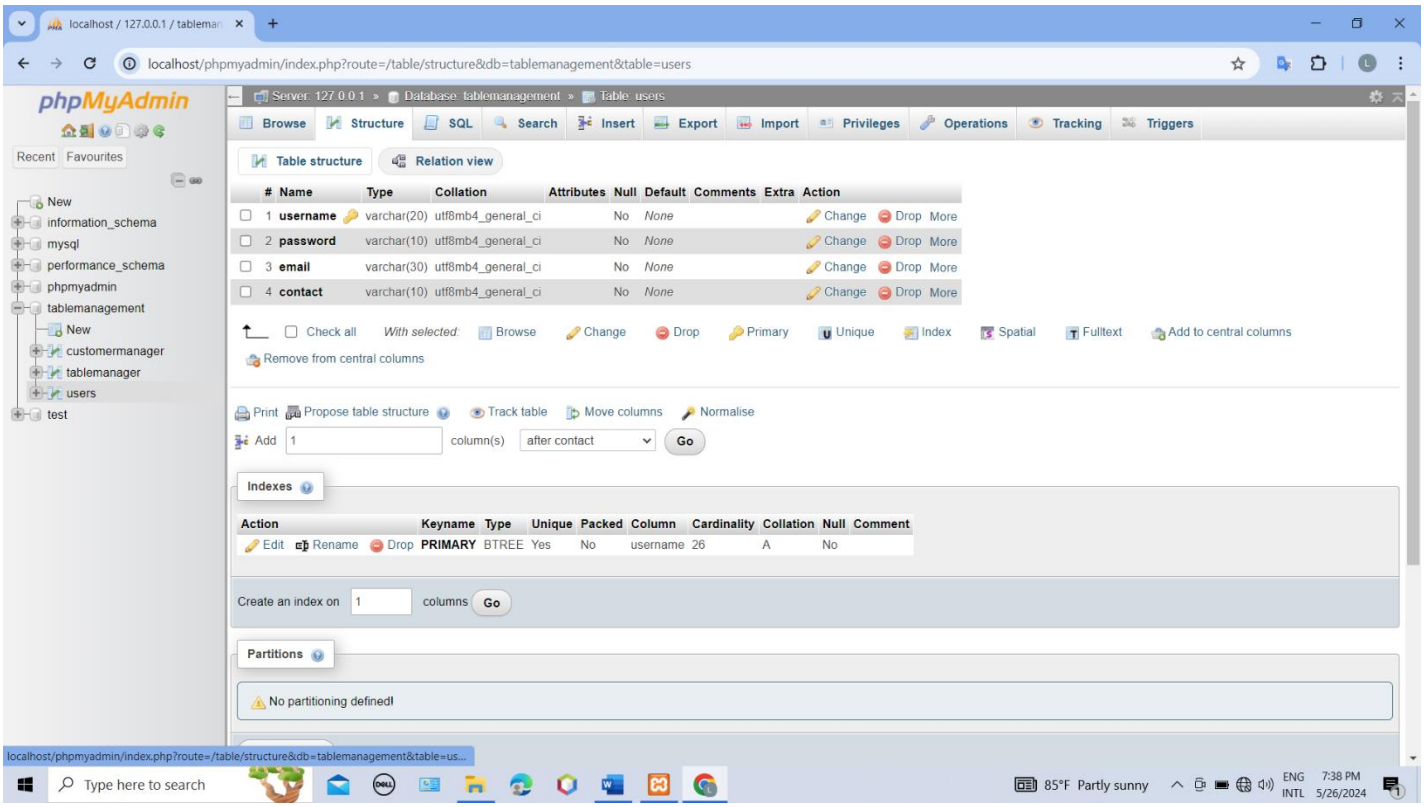

1. users
2. tablemanager
3. customermanager

Special notice: -

You should install the xampp application for execute this software. After you should open XAMPP Control Panel and open the Apache and MySQL. After you should click Admin of the MySQL. Now you come phpMyAdmin .After you click New from the left-hand side bar. After your create database as tablemanagement. Next, you select the tablemanagement and click on the “Import” tab in the top navigation menu. Then choose tablemanagement (SQL

Source File) from relevant location and click Import button .Then tablemanagement database fills the relevant tables.

1. users

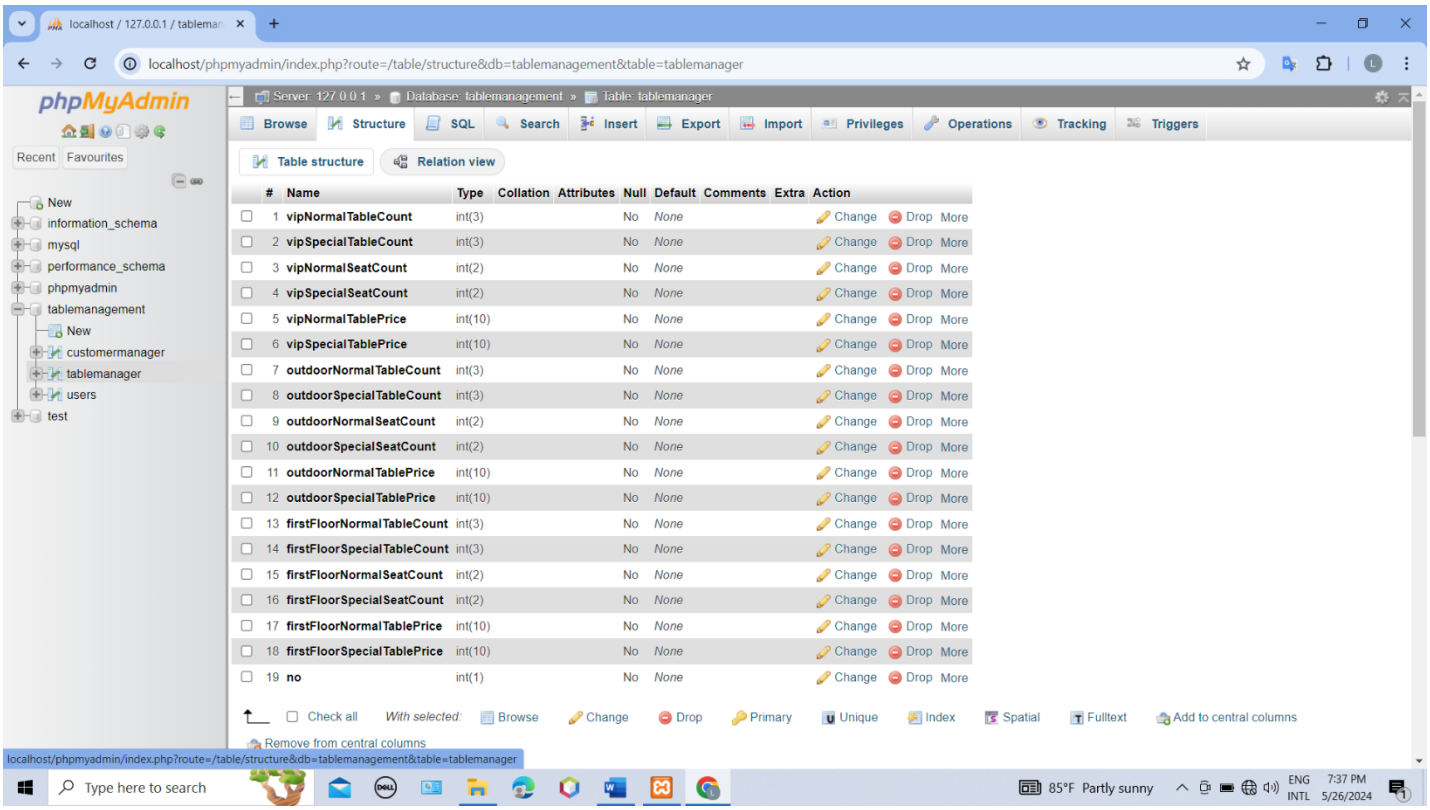

This table uses to store the user sign- up details. Usually contact number is integer type data but we get it as string type data for preventing “first letter zero not displaying” error.

“ user” table use for Sign-up page, Login page, Admin page and Registration details Manager page in system.

Length of the columns of users and its data types represent above image.

2.tablemanager

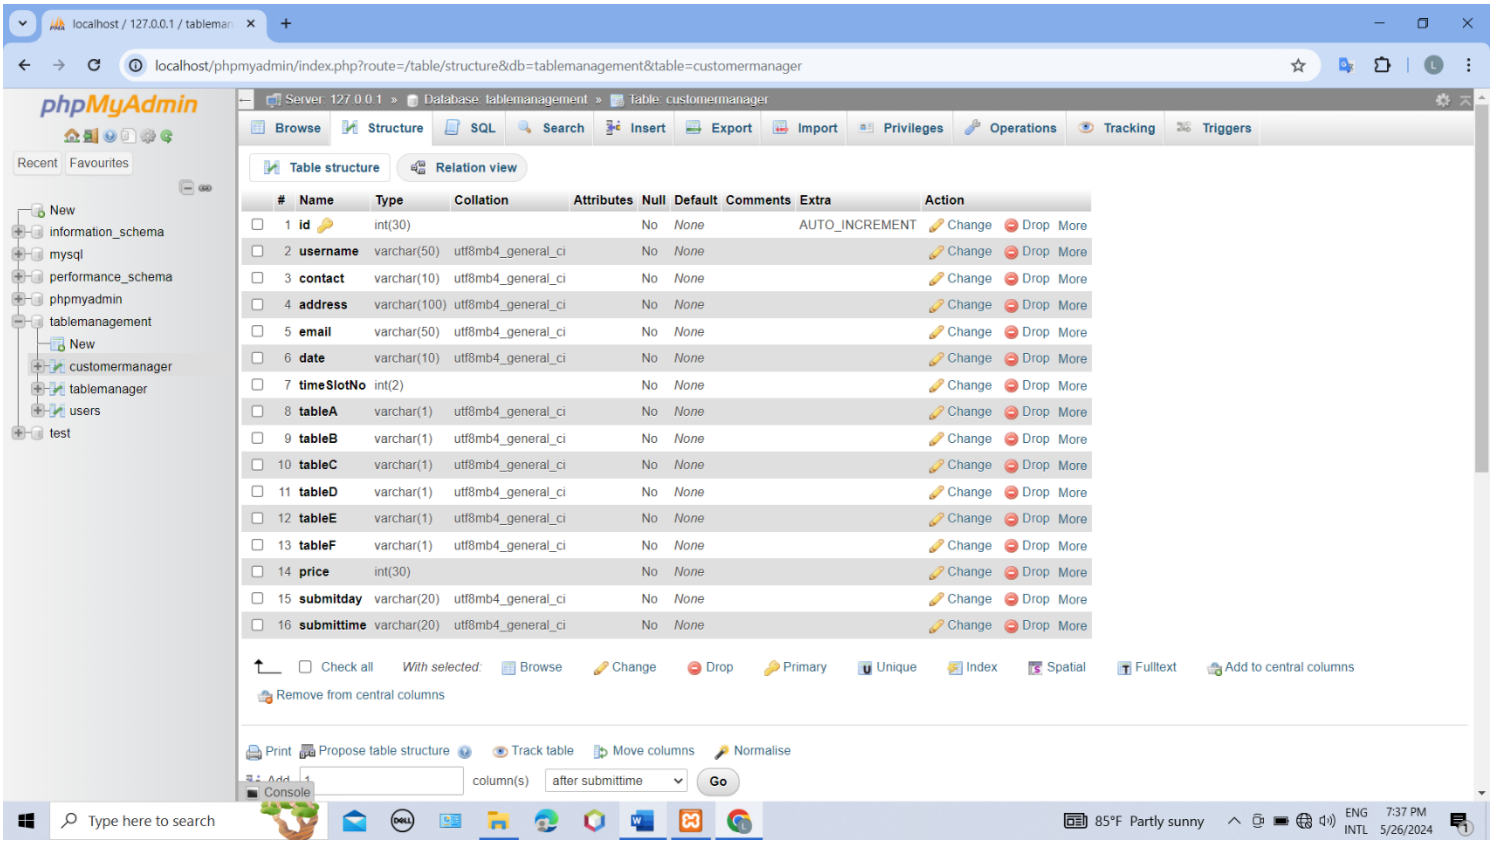

This table uses to store the all tables details of the restaurant.

"tablemanager" table use for Table Manager page, Admin page, Home page, First Floor page, Outdoor page and VIP Floor page in system.

Length of the columns of tablemanager and its data types represent above image.

3.customermanager

This table uses to store the customer booking details. Usually contact number is integer type data but we get it as string type data for preventing “first letter zero not displaying” error.

“customermanager” table use for Admin page, Home page, Booking details Manager page ,First Floor page, Outdoor page and VIP Floor page in system.

Length of the columns of customermanager and its data types represent above image.

Project description

This project develops by Apache NetBeans IDE 19. In addition to that I use the xampp. Further I use below jar files.

- mysql-connector-j-8.4.0
- jcalendar-1.4
- rs2xml
- RSCalendar

Note:

Please close the taskbar when execute the software for receiving best display.
